

Foxdell Wormeries and Compost bins

We have lots of compost bins and two wormeries around both school sites so that we can recycle as much of our green waste as possible. Our worms are fed with any leftover fruit and vegetable peelings, coffee grounds and prunings.

They turn this into compost that we can then use to put on our flower beds and on the growing beds on the school allotment to help the plants grow strong and healthy. They even produce a liquid plant feed to water the plants with.

How amazing are worms!
